Abstract

An online notice board is a place where people can leave any types of messages and notifications for advertisements, announcement of events or provide information. Online notice board can be placed on digital devices such as computers, tabs, mobile phones. This online notice board project is very helpful for all type of users like existing and new users. So admin can post or erase notification for other people to read and view. The main aim of this free online notice board project is to make information dissemination much easier in a paperless community as the world tends to interact with the online notice board facility as a project. Online notice board admin can send the notification to the particular students regarding fee payments, examination results or any new activity happening in the campus or college fest participation, libraries dues, hostel room payments, any workshop registrations, warnings and reminders. This work makes much easier and can be accessed by all authorized users. The data collected through secondary sources such as recorded information within departments and also through questionnaires to understand the system. The research methodology used in this study is an agreeable method, excellently chosen, described and accepted among many researchers in Information System. The research is conducted in several steps. The main objective of this study was to design and develop a WAP based notification system to notify the users about functions and events within the University. The study focused on the mobile phone as the device for carrying out the notifications, even though M-notifications can be carried out through several other kinds of devices, this is because mobile phone is common among the members compared to PDA or tablet PC.
